<u>LIST OF FIGURES.....</u>	<u>2</u>
<u>1. REQUIREMENTS.....</u>	<u>3</u>
1.1. <u>OVERALL DESCRIPTION.....</u>	<u>3</u>
1.2. <u>REQUIREMENT DEFINITIONS.....</u>	<u>3</u>
<u>2. Analysis and Solutions Approach.....</u>	<u>4</u>
<u>3. Class Diagrams.....</u>	<u>5</u>
<u>4. Tests.....</u>	<u>8</u>
<u>5. Scenario.....</u>	<u>10</u>

1. Requirements

1.1. Overall Description

It converts assembly code from infix expression in the given Text document. When converting before it converts postfixform.

1.2. Requirement Definitions

- 1.2.1. A Text Documents.
- 1.2.2. Write file permission.
- 1.2.3. Applying error handling.
- 1.2.4. Use only ArrayList data structure.

2. Analysis and Solutions Approach

Firstly Analys the infix formed text file reads it and converts each line to postfix form. Then sends converter class that converts each expression to assembly code from postfix expression form . When converting to postfix form uses stack data structure. And When converting assemble code operation converting uses Stack structure. Like this approach , I try to solve the problem.

3. Class Diagrams

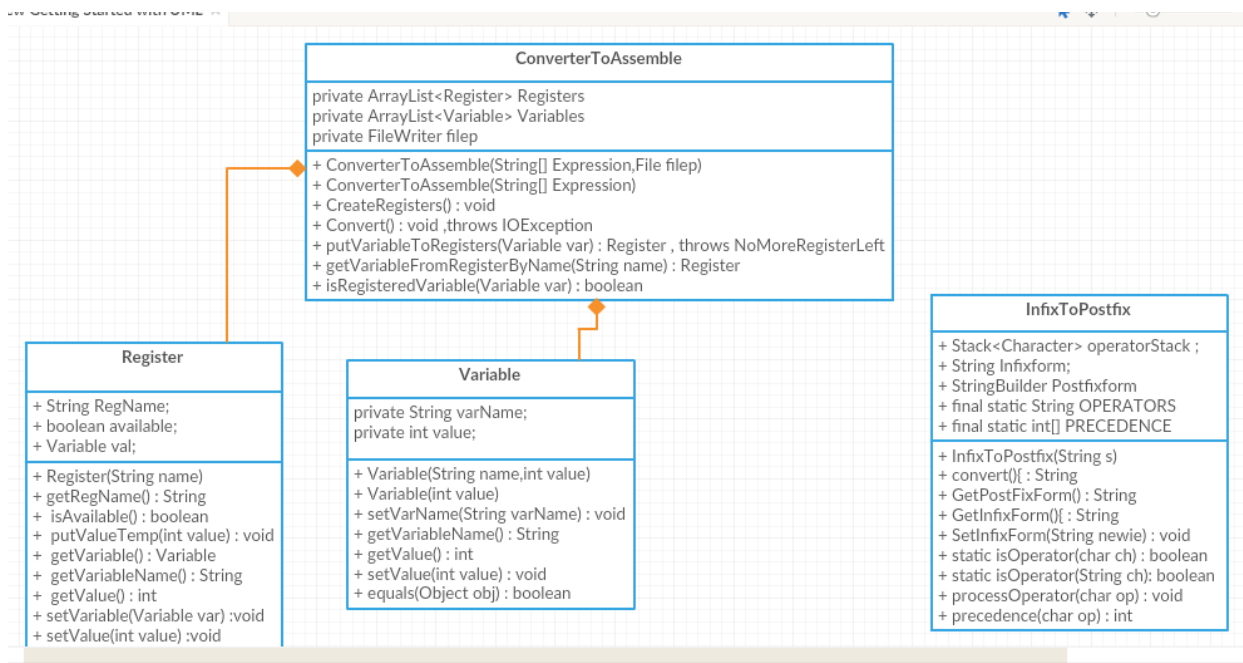

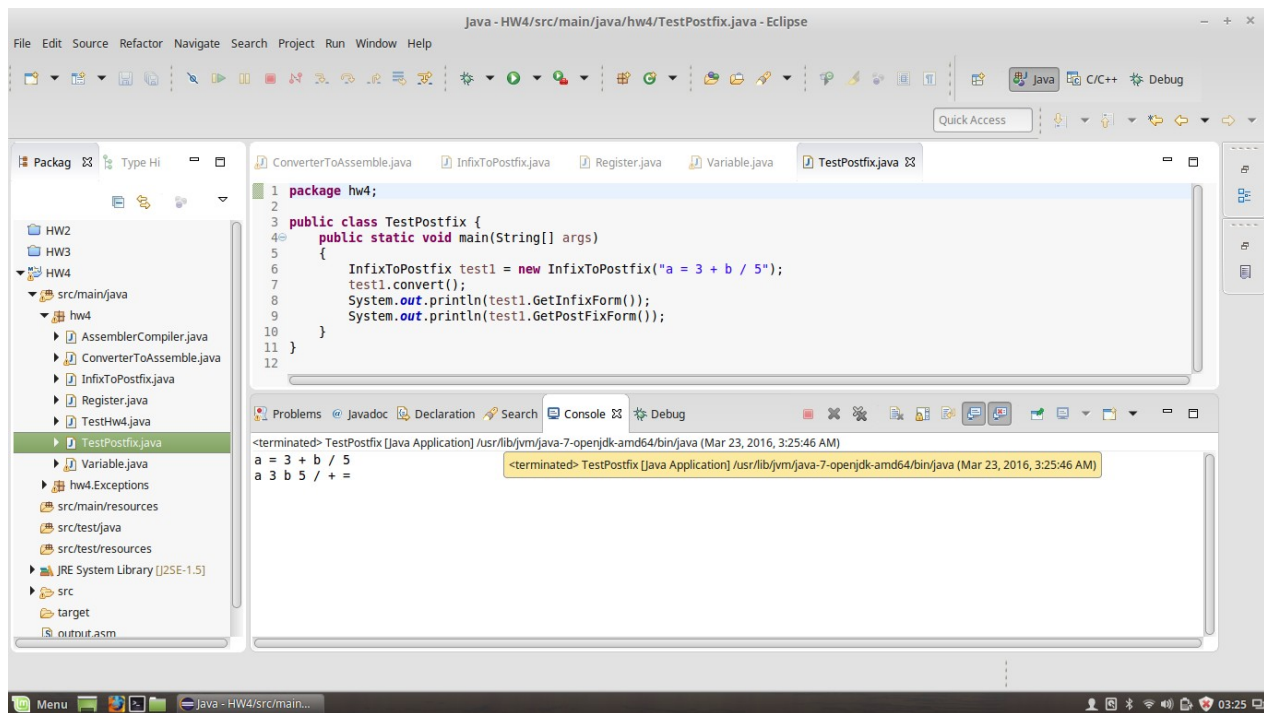

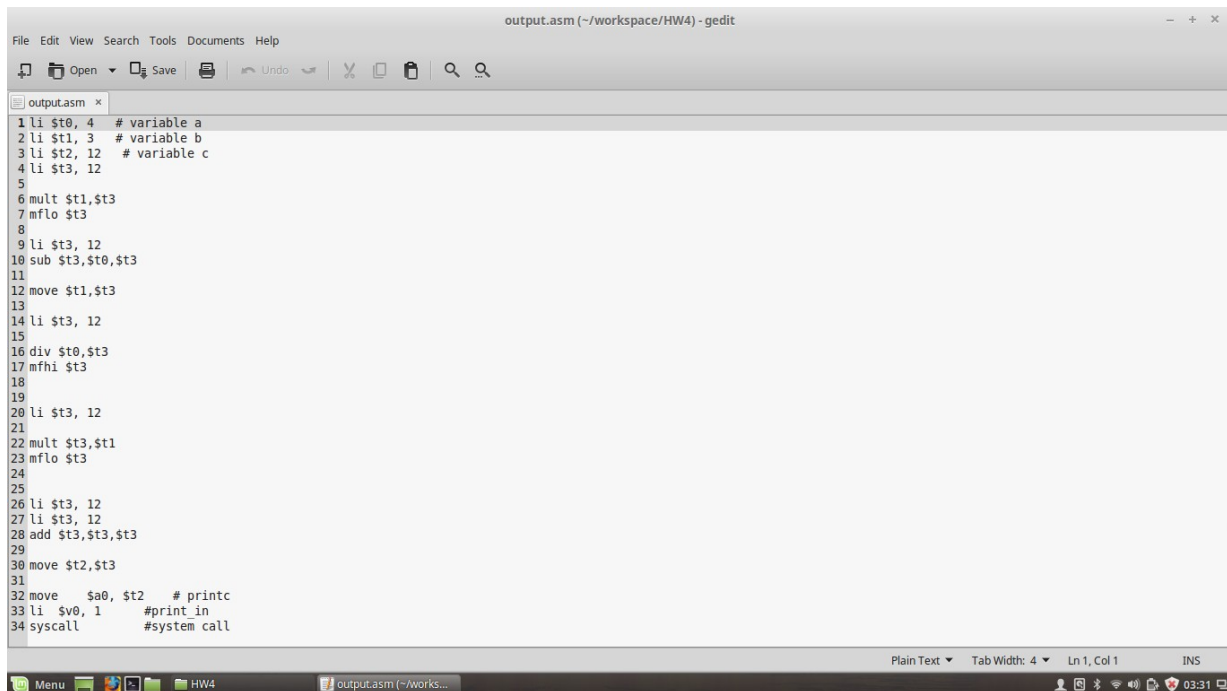

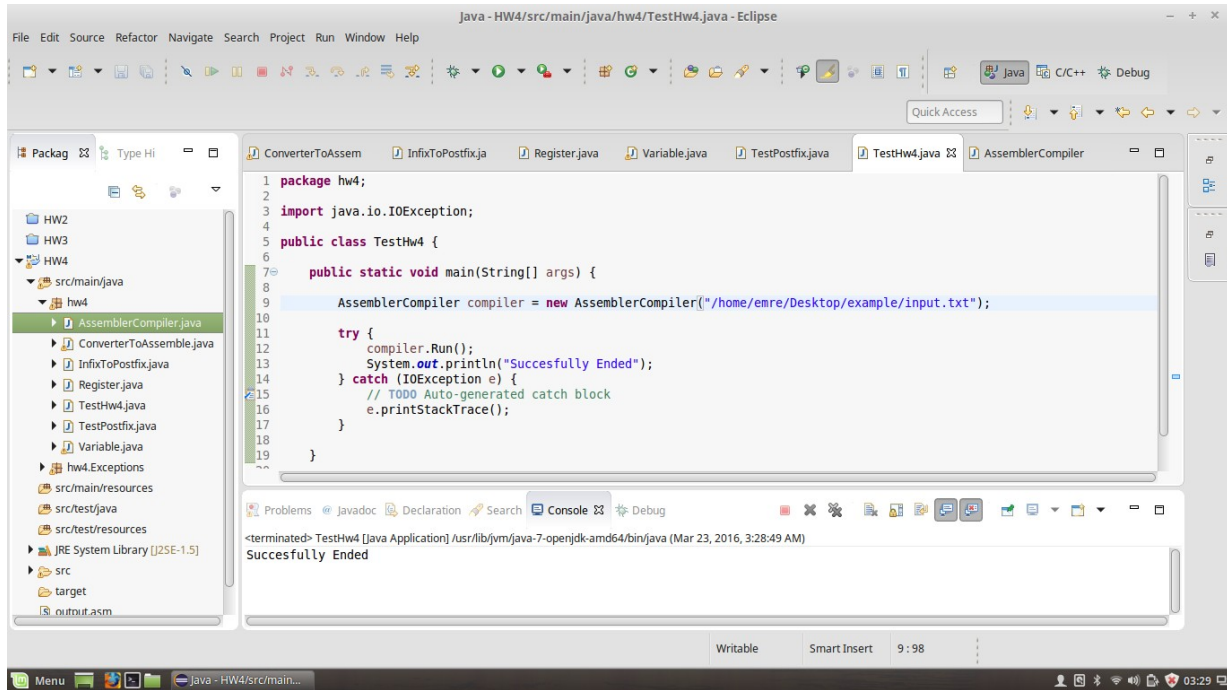

Figure 1 Class Diagram

5. Tests

6.Scenario

Registered Variable yüklemesi sıkıntı var henüz çözüm getirilemedi.

7.Sonuç

Assemble koda çevirirken baya zorlandım var olan bi değişkeni register dan tekrar almayı başaramadım. Geliştirdiğim algoritma aslında güzeldi fakat assignment operatörünü implement etmem zor oldu.
